Recommendation for iDa Mobile

Dear Sir/Madam,

Last year Bank Republic decided to implement mobile banking solution and chose iDa Mobile for it offered simple and intuitive applications for iPhones and Android devices.

Bank Republic needs required major changes in both, client and server-side software components, redesign of interface and support to additional language. Despite the complexity, the project was delivered in a set timeframe, fully meeting expectations of the bank and its clientele.

The solution was tested by reputable international security auditors to make sure mobile banking service offered to our clients was meeting highest security standards. The results of the audit allowed for an immediate launch of the service without major additional works.

Now, since few months that our clients are using iDa Mobile solution for mobile banking, we are confident that iDa Mobile was a best choice. The feedback from the clients is very positive and there is a good dynamic in growth of clients who use the application, as well as of the number of functions used.

Competitive price, relatively shorter Time to Market and overall good quality (secure, simple, intuitive) are the key reasons why we would recommend iDa Mobile to any bank that wants to implement state of the art mobile banking solutions.
